                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 INDIRECT TRANSCRIPTIONAL INHIBITION (BY SIMILARITY).

SUBBURIT: FORMS HETERODIMER WITH TIMELESS (TM); THE COMPLEX THEN TRANSLOCATES INTO THE NUCLEUS (BY SIMILARITY).

SUBCELLULAR LOCATION: NUCLEAR AT SPECIFIC PERIODS OF THE DAY.

FIRST ACCUMULATES IN THE PERINUCLEAR REGION ABOUT ONE HOUR BEFORE TRANSLOCATION INTO THE NUCLEUS. INTERACTION WITH TIM IS REQUIRED FOR NUCLEAR LOCALIZATION (BY SIMILARITY).

FOR NUCLEAR LOCALIZATION (BY SIMILARITY).

PTM: PHOSPHORYLATED WITH A CIRCADIAN RHYTHMICITY, PROBABLY BY THE DOUBLE-TIME PROTEIN (DBT). PHOSPHORYLATION COULD BE IMPLICATED IN THE STABILLTY OF PER MONOMER AND IN THE FORMATION OF HETERODIMER
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           RHYTHMICITY OF LOCOMOTOR ACTIVITY, ECLOSION BEHAVIOR, AND FOR THE RHYTHMIC COMPONENT OF THE MALE COURTSHIP SONG THAT ORIGINATES IN THE THORACIC NERVOUS SYSTEM. THE BIOLOGICAL CYCLE DEPENDS ON THE RHYTHMIC FORMATION AND NUCLEAR LOCALIZATION OF THE TIM-PER COMPLEX. LIGHT INDUCES THE DEGRADATION OF TIM, WHICH PROMOTES ELIMINATION OF PER. NUCLEAR ACTIVITY OF THE HETERODIMER COORDINATIVELY REGULATES PER AND TIM TRANSCRIPTION THROUGH A NEGATIVE FEEDBACK LOOP. BEHAVES AS A NEGATIVE ELEMENT IN CIRCADIAN TRANSCRIPTIONAL LOOP. DOES NOT APPEAR TO BIND DNA, SUGGESTING TRANSCRIPTIONAL LOOP. DOES NOT APPEAR TO BIND DNA, SUGGESTING
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    FUNCTION: ESSENTIAL FOR BIOLÓGICAL CLOCK FUNCTIONS: DETERMINES THE PERIOD LENGTH OF CIRCADIAN AND ULTRADIAN RHYTHMS; AN INCREASE IN PER DOSAGE LEADS TO SHORTENED CIRCADIAN RHYTHMS AND A DECREASE LEADS TO SHORTENED CIRCADIAN RHYTHMS.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          FUNCTION: CONTROLS REVERSIBLY ACTIN POLYMERIZATION AND
DEPOLYMERIZATION IN A PH-SENSITIVE MANNER. IT HAS THE ABILITY TO
BIND G- AND F-ACTIN IN A 1:1 RATIO OF COFILIN TO ACTIN. IT IS THE
MAJOR COMPONENT OF INTRANUCLEAR! AND CYTOPLASMIC ACTIN RODS. IN
EFFECT, YEAST COFILIN INCREASES, THE RATE OF ACTIN POLYMERIZATION
BY MAKING NEW ENDS AVAILABLE FOR ACTIN SUBUNIT ADDITION. SUCH A
PROTEIN COMPLEX IS IMPORTANT FOR THE POLARIZED GROWTH OF YEAST

The beta subunit catalyzes the condensation of 5-amino-6-(1'-D)-ribityl-amino-2,4(1H,3H)-pyrimidinedione with L-3,4-dihydrohy-2-butanone-4-phosphate yielding 6,7-dimethyl-8-lumazine (By similarity). CATALYTIC ACTIVITY: 2 6,7-dimethyl-8-lumazine (By similarity) riboflavin + 4-(1-D-ribitylamino)-5-amino-2,6-dihydroxypyrimidine.
